What is the sea?

The sea is a large body of salt water that covers about 71% of the Earth's surface. It is divided into four main oceans: the Pacific Ocean, the Atlantic Ocean, the Indian Ocean, and the Arctic Ocean. The sea is home to a wide variety of marine life, including fish, shellfish, sea turtles, and marine mammals.

What lives in the sea?

The sea is home to a vast array of marine life. Some of the most common marine animals include:

- **Fish:** Fish are the most abundant type of marine animal. There are over 30,000 known species of fish, ranging in size from the tiny goby to the massive whale shark.
- **Shellfish:** Shellfish are invertebrates that have a hard outer shell. Some common types of shellfish include clams, oysters, mussels, and lobsters.
- **Sea turtles:** Sea turtles are reptiles that have a hard shell and flippers. They are found in all of the world's oceans.
- **Marine mammals:** Marine mammals are mammals that live in the sea. Some common types of marine mammals include whales, dolphins, and seals.

How do these creatures survive in such a harsh environment?

The sea is a harsh environment, but the creatures that live in it have adapted to survive in its unique conditions. Some of the adaptations that these creatures have developed include:

- **Salt tolerance:** Marine animals have developed a variety of mechanisms to tolerate the high salt content of the sea. Some animals, such as fish, have gills that allow them to extract oxygen from the water. Other animals, such as sea turtles, have salt glands that help them to excrete excess salt.
- **Pressure tolerance:** The pressure at the bottom of the sea can be hundreds of times greater than the pressure at the surface. Marine

animals have developed a variety of adaptations to withstand this pressure, such as thick skin and strong bones.

- Temperature tolerance: The temperature of the sea can vary greatly from the surface to the bottom. Marine animals have developed a variety of adaptations to tolerate these temperature changes, such as fur or blubber to insulate them from the cold.

The sea is a vast and amazing place, full of incredible creatures and amazing wonders. In this article, we've provided you with a comprehensive guide to the sea and its inhabitants. We hope that you've enjoyed learning more about this fascinating subject.
