#### What is programming?

Programming is the process of telling a computer what to do. It's like writing a recipe for a computer, but instead of using ingredients like flour and sugar, you're using commands like "move forward" and "turn right." Programming can be used to create all sorts of things, from simple games to complex websites.

### Why should kids learn to code?

There are many benefits to learning to code, including:

- It helps kids develop problem-solving skills. When kids code, they have to figure out how to break down a problem into smaller steps and then how to write code to solve each step. This process helps kids develop their critical thinking and problem-solving skills.
- It helps kids learn how to think creatively. Coding requires kids to use their imaginations to come up with solutions to problems. This process helps kids develop their creativity and innovation skills.
- It helps kids prepare for the future. Coding is a valuable skill in today's job market. By learning to code, kids can set themselves up for success in a variety of careers.

#### How to get started

If you're looking to get your child started with programming, there are a few things you can do:

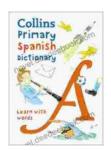

- Start with a simple language. There are many different programming languages out there, but for beginners, it's best to start with a simple language like Scratch, Python, or JavaScript.
- Find a good resource. There are many different resources available to help kids learn to code. Some popular resources include Code.org, Khan Academy, and Tynker.
- Be patient and supportive. Learning to code takes time and effort. Be patient with your child and offer support as they learn.

### Fun projects for beginners

Here are a few fun projects that beginner programmers can try:

- Create a simple game. This could be a basic game like tic-tac-toe or hangman.
- Build a website. This could be a simple website with just a few pages.
- Create a mobile app. This could be a simple app like a calculator or a to-do list.

Getting started with programming is a great way for kids to develop their problem-solving, creativity, and innovation skills. With the right resources and support, kids of all ages can learn to code and create amazing things.
