Weaving is an ancient craft that has been used to create beautiful and functional fabrics for centuries. There are many different types of weaving, but two of the most popular are waft-faced and tapestry weaving. Waft-faced weaving is a type of plain weave in which the weft threads are more visible than the warp threads. Tapestry weaving is a type of weft-faced weaving in which the weft threads are used to create images or designs.

In this guide, we will teach you the basics of waft-faced and tapestry weaving, so that you can start creating your own beautiful fabrics.

### Materials

To get started with waft-faced or tapestry weaving, you will need the following materials:

- A loom
- Warp threads
- Weft threads
- A shuttle or bobbin
- A beater
- A tapestry needle (optional)

You can find all of these materials at your local craft store or online.

## **Getting Started**

Once you have gathered your materials, you can start weaving! The first step is to warp your loom. This is the process of threading the warp threads through the loom. Once your loom is warped, you can start weaving. To weave, you will pass the weft thread over and under the warp threads, creating a fabric.

There are many different ways to weave, but the two most basic weaves are the plain weave and the twill weave. In a plain weave, the weft thread passes over one warp thread and under the next. In a twill weave, the weft thread passes over two warp threads and under the next two. These two weaves can be combined to create a variety of different patterns.

## **Waft-Faced Weaving**

Waft-faced weaving is a type of plain weave in which the weft threads are more visible than the warp threads. This is achieved by using a weft thread that is thicker than the warp thread. Waft-faced weaving can be used to

create a variety of different fabrics, including clothing, upholstery, and blankets.

To weave a waft-faced fabric, you will need to use a loom with a heddle. A heddle is a device that helps to lift the warp threads up and down, making it easier to pass the weft thread through. Once your loom is warped, you can start weaving. To weave a waft-faced fabric, you will pass the weft thread over one warp thread and under the next. You will then repeat this process until you reach the end of the row. Once you reach the end of the row, you will turn around and weave back in the opposite direction.

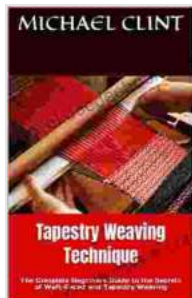

## **Tapestry Weaving**

Tapestry weaving is a type of weft-faced weaving in which the weft threads are used to create images or designs. Tapestry weaving can be used to create a variety of different items, including wall hangings, rugs, and clothing. To weave a tapestry, you will need to use a loom with a heddle and a tapestry needle. Once your loom is warped, you can start weaving. To weave a tapestry, you will pass the weft thread over one warp thread and under the next. You will then repeat this process until you reach the end of the row. Once you reach the end of the row, you will turn around and weave back in the opposite direction.

As you weave, you will use the tapestry needle to create images or designs. To do this, you will need to use different colors of weft thread and to change the way that you pass the weft thread over and under the warp threads.

Weaving is a beautiful and rewarding craft that can be used to create a variety of different fabrics and items. Waft-faced and tapestry weaving are

two of the most popular types of weaving, and they are both relatively easy to learn. With a little practice, you can create beautiful fabrics and items that will last for years to come
